Apple IIGs® Logic Board Replacement

You ordered the 256K Apple IIGs Logic Board (661-0334). Due to material constraints, we are shipping you the 1Mb Logic Board (661-0515). This board is an upgraded board for the Apple IIGs and offers all of the features of the 256K Logic Board (661-0334), as well as sound capability and a 15% performance increase. The 1Mb Logic Board (661-0515) can be used on all originally manufactured Apple IIGs systems.

The 1Mb Logic Board (661-0515), while an upgrade to the 256K Logic Board (661-0334), has been shipped to you at the same cost of the 256K Logic Board (661-0334). We will have temporary random material shortages on the 256K Logic Board (661-0334) and will periodically be shipping the 1Mb Logic Board (661-0515) in its place.

The 1Mb Logic Board (661-0515) *CANNOT* be used on the Apple IIe that has been upgraded to an Apple IIGs. Therefore, if you are repairing an Apple IIe that has been upgraded to an Apple IIGs, you will need to order the part number 661-0679 to repair the system.
