

1 MB SIMMS INSTALLATION ON ENHANCE

April 12, 1988

These are the updated requirements for upgrading the enhance board from 1MB to 4MB of RAM.

The older version of the enhance rev 3 board went out with E3000 v1.0 and E4000 v2.0 pals. If the dealer is trying to install 1MB simms on this board it will not work. The dealer has to send the board back because the E3000 v1.0 pal is soldered. When writing the RMA please specify that the board should be sent back with E3000 v2.0 and E6000 pal.

The current version of the enhance rev 3 board goes out with E3000 v2.0 and E4000 v2.0 pals. To install 1MB simms on this board the only thing the dealer needs is the E6000 pal. When the dealer receives the E6000 pal all he has to do is replace the E4000 v2.0 pal on the board.

The upgraded board should look like this:
